Michael Tucker

Curriculum Vitae

✉ tucker.957@osu.edu

Research Interests: I am an observational astronomer focused on big-data in the time domain – imaging and spectroscopic surveys, Type Ia and core-collapse supernovae, accretion onto supermassive black holes, and variable stars. Recent highlights can be found on my website.

Positions Held

2022- **CCAPP Postdoctoral Fellow**, *Center for Cosmology and Astroparticle Physics*, The Ohio State University, Columbus, OH.

Education

2019–2022 **Doctorate of Philosophy: Astronomy**, *U.S. Dept. of Energy Computational Science Graduate Fellow*, Institute for Astronomy, University of Hawaii at Manoa, Advisor: B. J. Shappee.

2017–2019 **Master of Science: Astronomy**, *University of Hawai'i at Manoa*.

2013–2017 **Bachelor of Science: Physics (Cum Laude, University and Departmental Honors)**, *Appalachian State University*.

Projects

2018- **The Spectroscopic Classification of Astronomical Transients (SCAT) survey**, co-founder, co-PI, and lead pipeline developer. *Science Objectives*: Search for and characterize the exotic and unusual events in the time-variable sky including peculiar supernovae, tidal disruption events, interstellar objects, and more.

2023- **The ASAS-SN Low Surface Brightness Project**, co-PI. *Science Objectives*: Create the first all-sky image atlas using modern CCDs by stacking more than a decade of imaging from the All-Sky Automated Survey for SuperNovae (ASAS-SN).

Advising

2025- J. Ghammashi, Undergraduate, OSU. Topic: Late-time *HST* Imaging of the SN Ia 2021aefx.

2023- E. Jennerjahn, Graduate, OSU. Topic: The Most Metal-poor Supernovae.

2023-2025 N. Flinner, Undergraduate, OSU. Topic: Core-collapse Supernovae in GALEX. Current PNC Bank employee.

2022-2024 V. Berger, Undergraduate, Pomona (co-advised). Topic: M-dwarf Flares in GALEX. Current MIT graduate student.

2022-2024 K. Neumann, Post-bac, OSU. Topic: Light Echoes of Tycho's SN and Cas A in ASAS-SN. Current Penn State graduate student.

2021-2022 A. Gardner, Undergraduate, UH Manoa. 2021 IfA Summer REU Program. Topic: Evolved planetary systems. Current State of Hawai'i employee.

2020-2021 L. Dubay, Undergraduate, Whitman. 2020 IfA Summer REU Program. Topic: Progenitors of Type Ia supernovae. Current OSU graduate student.

2019-2020 D. Rowan, Undergraduate, Haverford. 2019 IfA Summer REU Program. Topic: Variable white dwarfs. Former OSU graduate student, current NASA Hubble fellow.

Grants and Awards

2025 David J. Will Prize in Computational and Survey Science (OSU)

2024 *Hubble Space Telescope* Program GO 17837, PI: Tucker. 8 orbits in Cycle 32.

2023 *Hubble Space Telescope* Program GO 17429, PI: Tucker. 10 orbits in Cycle 31.

2018- *Ground-based observing*: 16 successful observing proposals as P.I. including 28 nights on $8-10$ m telescopes (LBT, Keck, Gemini) and ~ 250 nights on $2-5$ m telescopes. ≈ 300 total nights of observing experience on optical and near-IR instrumentation.

2018 U.S. Department of Energy Computational Science Graduate Fellowship

Seminars and Talks

Invited/Colloquia (abridged)

Sept. 2025 The Ohio State University, Columbus, OH

Mar. 2025 University of Hawai'i, Hilo, HI

Feb. 2025 Massachusetts Institute of Technology, Cambridge, MA.

Jan. 2025 Ball State University, Muncie, IN.

Jan. 2024 University of Melbourne, Melbourne, Australia.

Jan. 2024 University of Sydney, Sydney, Australia.

Sept. 2023 *The Golden Age of CVs and Related Objects - VI*, Palermo, Italy.

June 2023 AAS workshop: *Small Telescopes in the Era of Large Surveys*, Albuquerque, NM.

Contributed (abridged)

Oct. 2026 "The Extreme Explosion of a Massive, Metal-poor Star." *Type II Supernovae: The Chaotic Deaths of Supergiants and their Cosmic Implications*, San Pedro de Atacama, Chile.

Aug. 2025 "The Most Metal-poor Supernova." *Rise Time*, Purdue University, West Lafayette, IN.

Feb. 2024 "SCAT Data Release 1: Spectra of 1000 Supernovae." *Transients Down Under*, Swinburne Institute of Technology, Melbourne, Australia.

Service & Outreach

2026 **Lead organizer:** ***Type-Ia Progenitors and Cosmology in Light of DESI***, *conceived and organized a workshop at OSU's CCAPP to bring together experts on Type Ia supernova explosions with those using supernovae for cosmology*, Oct. 14-16, 2026, Columbus, OH.

2023- **Review Panelist**, NASA, NSF.

2023, 2024 **Organizer: CCAPP Fellow Symposium**, *Center for Cosmology and AstroParticle Physics*, Columbus, OH.

2019- **Referee**, *ApJ, ApJL, AJ, MNRAS, OJAp, PASP*.

2017- **Public Lectures**, *Honolulu, HI, and Columbus, OH.*, I regularly give talks to local organizations, schools, and libraries about the scientific method, how astronomers conduct research in the modern era, and various research-related topics suitable for the public.

2017- **Maunakea Scholars Initiative**, Maunakea Scholars provides local high school students with the opportunity to obtain telescope time from the telescopes atop Maunakea. I help the students identify science objectives, write the proposals, and analyze their data.

Teaching

2022- **Instruction**, *Columbus, OH*, ≈30 hours of teaching across undergraduate and graduate courses in astronomy and physics.

Press Releases and Articles (abridged)

2024 OSU News: Novel supernova observations grant astronomers a peek into the cosmic past

2023 OSU News: Galactic explosion offers astrophysicists new insight into the cosmos

Publications

14 first author, 15 with major contribution, and 63 additional papers. ≈ 3000 citations, $h \simeq 33$ as of 2026-10-01.

Submitted/Published

First author

I have published a total of 14 first-author papers, including 7 on the progenitors and explosions physics of Type Ia supernovae, 4 papers on the data, methods, and discoveries of the SCAT survey, and 3 additional papers on other interesting time-domain phenomena.

1. *SCAT Data Release 1: 1812 optical spectra of 1331 transients*. **Tucker**, Huber, Shappee, et al. (2026), 2026OJAp....969213T.
2. *Merging white dwarf binaries produce Type Ia supernovae in elliptical galaxies*. **Tucker** (2025), 2025MNRAS.538L...1T.
3. *Weighing The Options: The Unseen Companion in LAMOST J2354 is Likely a Massive White Dwarf*. **Tucker**, Wheeler, Rowan, et al. (2025), 2025OJAp....8E..61T.
4. *The Extremely Metal-Poor SN 2023ufx: A Local Analog to High-Redshift Type II Supernovae*. **Tucker**, Hinkle, Angus, et al. (2024), 2024ApJ...976..178T.
5. *The HST Non-Detection of SN Ia 2011fe 11.5yr After Explosion Further Restricts Single-Degenerate Progenitor Systems*. **Tucker** & Shappee (2024), 2024ApJ...962...74T.
6. *The Spectroscopic Classification of Astronomical Transients (SCAT) Survey: Overview, Pipeline Description, Initial Results, and Future Plans*. **Tucker**, Shappee, Huber, et al. (2022), 2022PASP..134l4502T.
7. *The Whisper of a Whimper of a Bang:* 2400 *Days of the Type Ia SN 2011fe Reveals the Decay of* ^{55}*Fe*. **Tucker**, Shappee, Stanek, et al. (2022), 2022MNRAS.517.4119T.
8. *A Rapid Ionization Change in the Nebular-Phase Spectra of the Type Ia SN 2011fe*. **Tucker**, Ashall, Shappee, et al. (2022), 2022ApJ...926L..25T.
9. *An AMUSING Look at the Host-Galaxy of ASASSN-14ko Reveals a Second AGN*. **Tucker**, Shappee, Hinkle, et al. (2021), 2021MNRAS.506.6014T.
10. *SN 2019yvq Does Not Conform to SN Ia Explosion Models*. **Tucker**, Ashall, Shappee, et al. (2021), 2021ApJ...914...50T.
11. *Nebular spectra of 111 Type Ia supernovae disfavour single-degenerate progenitors*. **Tucker**, Shappee, Vallely, et al. (2020), 2020MNRAS.493.1044T.
12. *No Stripped Companion Material in the Nebular Spectrum of the "Two-Component" Type Ia Supernova ASASSN-18bt*. **Tucker**, Shappee, & Wisniewski (2019), 2019ApJ...872L..22T.
13. *ASASSN-18ey: The Rise of a New Black Hole X-Ray Binary*. **Tucker**, Shappee, Holoien, et al. (2018), 2018ApJ...867L...9T.
14. *White dwarf variability with gPhoton: pulsators*. **Tucker**, Fleming, Pelisoli, et al. (2018), 2018MNRAS.475.4768T.

Major contribution

These papers often originate from projects I designed and/or are published by my students.

15. *Nebular Spectra of the Extremely Metal-Poor SN II 2023ufx Over a Year After Explosion: A Massive Progenitor and Unique Circumstellar Environment*. Jennerjahn, **Tucker**, Kochanek, et al. (2026), submitted to OJAp (arXiv:2609.04307).
16. *The ASAS-SN Low Surface Brightness Survey I: Proof-of-Concept and Potential Applications*. Jennerjahn, **Tucker**, Shappee, et al. (2025), submitted to OJAp (arXiv:2506.14873).
17. *A Swift Fix II: Physical Parameters of Type I Superluminous Supernovae*. Hinkle, Shappee, and **Tucker** (2025), 2025OJAp....8E.133H.
18. *Echo Location: Distances to Galactic Supernovae From ASAS-SN Light Echoes and 3D Dust Maps*. Neumann, **Tucker**, Kochanek, et al. (2024), 2024OJAp....7E..98N.
19. *A hidden population of massive white dwarfs: two spotted K + WD binaries*. Rowan, Jayasinghe, **Tucker**, et al. (2024), 2024MNRAS.529..587R.
20. *Stellar Flares Are Far-Ultraviolet Luminous*. Berger, Hinkle, **Tucker**, et al. (2024), 2024MNRAS.532.4436B.
21. *SCAT Uncovers ATLAS's First Tidal Disruption Event ATLAS18mlw: A Faint and Fast TDE in a Quiescent Balmer Strong Galaxy*. Hinkle, **Tucker**, Shappee, et al. (2023), 2023MNRAS.519.2035H.
22. *Serendipitous Nebular-phase JWST Imaging of SN Ia SN 2021aefx: Testing the Confinement of 56Co Decay Energy*. Mayker Chen, **Tucker**, Hoyer, et al. (2023), 2023ApJ...944L..28C.
23. *Four years of Type Ia Supernovae Observed by TESS: Early Time Light Curve Shapes and Constraints on Companion Interaction Models*. Fausnaugh, Vallely, **Tucker**, et al. (2023), 2023ApJ...956..108F.
24. *Late-Onset Circumstellar Medium Interactions are Rare: An Unbiased GALEX View of Type Ia Supernovae*. Dubay, **Tucker**, Do, et al. (2022), 2022ApJ...926...98D.
25. *Signatures of bimodality in nebular phase Type Ia supernova spectra*. Vallely, **Tucker**, Shappee, et al. (2020), 2020MNRAS.492.3553V.
26. *The Outburst of the Young Star Gaia19bey*. Hodapp, Denneau, **Tucker**, et al. (2020), 2020AJ....160..164H.
27. *The Rise and Fall of ASASSN-18pg: Following a TDE from Early to Late Times*. Holoien, Auchettl, **Tucker**, et al. (2020), 2020ApJ...898..161H.
28. *Detections and constraints on white dwarf variability from time-series GALEX observations*. Rowan, **Tucker**, Shappee, et al. (2019), 2019MNRAS.486.4574R.
29. *Interstellar Interlopers: Number Density and Origin of 'Oumuamua-like Objects*. Do, **Tucker**, & Tonry (2018), 2018ApJ...855L..10D.

Additional papers

30. *Flashing with colours: Photometric indicators of an early interaction in type II supernovae* . Mendez-Llorca, Folatelli, Gutierrez, et al. (2026), accepted by A&A (arXiv:2610.23852).
31. *ATLAS22kjn (AT 2022fpx): A Coronal Line Emitter with an Early Light Curve Bump and Mid-Infrared Dust Echo* . Engholm, Hinkle, Shappee, et al. (2026), submitted to OJAp (arXiv:2608.11300).
32. *AT2021yky: A Fast-Rising Optical Transient with Evolving Broad Hydrogen Emission Consistent with an Ambiguous Nuclear Transient*. Pandey, Hinkle, Kochanek, et al. (2026), submitted to OJAp (arXiv:2608.06462).
33. *The type Ia supernova 2023vjh: A peculiar 1991bg-like supernova with unusually faint light curves*. Kopsacheili, Galbany, Folatelli, et al. (2026), 2026A&A...713A.202K.
34. *A Natural* $\gtrsim 100\times$ *Telescope: Discovery of the Strongly Lensed Type II SN 2025mkn at* $z = 1.37$. Lemon, Goobar, Johansson, et al. (2026), 2026ApJ..1003L..47L.
35. *ASAS-SN Rates IV: Constraints on the Kilonova Rate*. Desai, Shappee, Kochanek, et al. (2026), submitted to OJAp (arXiv:2603.26871).
36. *The Enigmatic Type Icn Supernova 2024abvb Located ∼22 kpc from Its Host Galaxy*. Shi, Auchettl, Hoogendam, et al. (2026), submitted to PASA (arXiv:2602.16227).
37. *Contemporaneous Optical and Near-Infrared Observations of the Interstellar Comet 3I/ATLAS Pre- and Post-Perihelion*. Medler, Hoogendam, Ashall, et al. (2026), 2026AJ....172...25M.
38. *University of Hawaii 88-inch Telescope Observations of the Interstellar Comet 3I/ATLAS: Spectrophotometric Blue-Sensitive Spectral Time Series Spanning Two Months from Discovery*. Hoogendam, Kuesters, Shappee, et al. (2026), 2026OJAp....965099H.
39. *Multiple outflows and delayed ejections revealed by early imaging of novae*. Aydi, Monnier, Merand, et al. (2026), 2026NatAs..10..271A.
40. *JWST Observations of SN 2024ggi II: NIRSpec Spectroscopy and CO Modeling at 285 and 385 Days Past the Explosion*. Mera, Ashall, Hoeflich, et al. (2026), 2026ApJ...997..330M.
41. *JWST Observations of SN 2023ixf I: Completing the Early Multi-Wavelength Picture with Plateau-phase Spectroscopy*. DerKacy, Ashall, Baron, et al. (2026), 2026ApJ...997..179D.
42. *Pan-STARRS follow-up of the gravitational-wave event S250818k and the lightcurve of SN 2025ulz*. Gillanders, Huber, Nicholl, et al. (2025), 2025ApJ...995L..27G.
43. *Unraveling the Nature of the Nuclear Transient AT2020adpi*. Pandey, Hinkle, Kochanek, et al. (2025), 2025OJAp....851453P.

44. *Discovery and Preliminary Characterization of a Third Interstellar Object: 3I/ATLAS*. Seligman, Marco, Farnocchia, et al. (2025), 2025ApJ...989L..36S.
45. *Plasma instabilities dominate radioactive transients magnetic fields: the self-confinement of leptons in Type Ia and core-collapse supernovae, and kilonovae*. Desai, Hagerty, Shappee, et al. (2025), 2025MNRAS.541.2197D.
46. *Early and Extensive Ultraviolet through Near Infrared Observations of the Intermediate-luminosity Type Iax Supernovae 2024pxl*. Hoogendam, Ashall, Jones, et al. (2025), 2025ApJ...988..209H.
47. *JWST Observations of SN 2023ixf II: The Panchromatic Evolution Between 250 and 720 Days After the Explosion*. Medler, Ashall, Hoeflich, et al. (2025), 2025ApJ...993..191M.
48. *JWST Observations of SN 2024ggi I: Interpretation and Model Comparison of the Type II Supernova 2024ggi at 55 days Past Explosion*. Baron, Ashall, DerKacy, et al. (2025), 2025ApJ...994..249B.
49. *ASASSN-24fw: An 8-month long, 4.1 mag, optically achromatic and polarized dimming event*. Fores-Toribio, JoHantgen, Kochanek, et al. (2025), 2025OJAp....8E.114F.
50. *Expanding the parameter space of 2002es-like type Ia supernovae: On the underluminous ASASSN-20jq/SN 2020qxp*. Bose, Stritzinger, Ashall, et al. (2025), 2025A&A...699A.169B.
51. *The most energetic transients: Tidal disruptions of high-mass stars*. Hinkle, Shappee, Auchettl, et al. (2025), 2025SciA...11...74H.
52. *Hawai'i Supernova Flows: a peculiar velocity survey using over a Thousand Supernovae in the near-infrared*. Do, Shappee, Tonry, et al. (2025), 2025MNRAS.536..624D.
53. *The Anomalous Acceleration of PSR J2043+1711: Long-Period Orbital Companion or Stellar Flyby?*. Donlon, Chakrabartia, Lam, et al. (2025), 2025ApJ...983...62D.
54. *On the Double: Two Luminous Flares from the Nearby Tidal Disruption Event ASASSN-22ci (AT2022dbl) and Connections to Repeating TDE Candidates* . Hinkle, Auchettl, Hoogendam, et al. (2024), submitted to OJAp (arXiv:2412.15326).
55. *JWST NIRSpec+MIRI Observations of the nearby Type IIP supernova 2022acko*. Shahbandeh, Ashall, Hoeflich, et al. (2024), submitted to MNRAS (arXiv:2401.14474).
56. *1991T-like Supernovae*. Phillips, Ashall, Brown, et al. (2024), 2024ApJS..273...16P.
57. *Discovery and follow-up of ASASSN-23bd (AT 2023clx): the lowest redshift and luminosity optically selected tidal disruption event*. Hoogendam, Hinkle, Shappee, et al. (2024), 2024MNRAS.530.4501H.

58. *Ground-based and JWST Observations of SN 2022pul: I. Unusual Signatures of Carbon, Oxygen, and Circumstellar Interaction in a Peculiar Type Ia Supernova*. Siebert, Kwok, Johnansson, et al. (2024), 2024ApJ...960...88S.
59. *Ground-based and JWST Observations of SN 2022pul: II. Evidence from Nebular Spectroscopy for a Violent Merger in a Peculiar Type-Ia Supernova*. Kwok, Siebert, Johansson, et al. (2024), 2024ApJ...966..135K.
60. *An Episode of Occultation Events in Gaia21bcv*. Hodapp, Gaidos, Kenworthy, et al. (2024), 2024AJ....167...85H.
61. *From Out of the Blue: Swift Links 2002es-like, 2003fg-like, and Early-Time Bump Type Ia Supernovae*. Hoogendam, Shappee, Brown, et al. (2024), 2024ApJ...966..139H.
62. *A JWST Medium Resolution MIRI Spectrum and Models of the Type Ia supernova 2021aefx at +415 d*. Ashall, Hoeflich, Baron, et al. (2024), 2024ApJ...975..203A.
63. *JWST MIRI/Medium Resolution Spectrograph (MRS) Observations and Spectral Models of the Underluminous Type Ia Supernova 2022xkq*. DerKacy, Ashall, Hoeflich, et al. (2024), 2024ApJ...961..187D.
64. *Strong Carbon Features and a Red Early Color in the Underluminous Type Ia SN 2022xkq*. Pearson, Sand, Lundqvist, et al. (2024), 2024ApJ...960...29P.
65. *Characterizing the Rapid Hydrogen Disappearance in SN 2022crv: Evidence of a Continuum between Type Ib and IIb Supernova Properties*. Dong, Valenti, Ashall, et al. (2024), 2024ApJ...974..316D.
66. *SN 2022jli: A Type Ic Supernova with Periodic Modulation of Its Light Curve and an Unusually Long Rise*. Moore, Smartt, Nicholl, et al. (2023), 2023ApJ...956L..31M.
67. *SN 2021gno: a calcium-rich transient with double-peaked light curves*. Ertini, Folatelli, Martinez, et al. (2023), 2023MNRAS.526..279E.
68. *AT2022aedm and a new class of luminous, fast-cooling transients in elliptical galaxies*. Nicholl, Srivastav, Fulton, et al. (2023), 2023ApJ...954L..28N.
69. *SN2021fxy: mid-ultraviolet flux suppression is a common feature of Type Ia supernovae*. DerKacy, Paugh, Baron, et al. (2023), 2023MNRAS.522.3481D.
70. *Multiple flares in the changing-look AGN NGC 5273*. Neustadt, Hinkle, Kochanek, et al. (2023), 2023MNRAS.521.3810N.
71. *JWST Low-resolution MIRI Spectral Observations of SN 2021aefx: High-density Burning in a Type Ia Supernova*. DerKacy, Ashall, Hoeflich, et al. (2023), 2023ApJ...945L...2D.
72. *A JWST Near- and Mid-Infrared Nebular Spectrum of the Type Ia Supernova 2021aefx*. Kwok, Jha, Temim, et al. (2023), 2023ApJ...944L...3K.
73. *ASAS-SN Sky Patrol V2.0*. Hart, Shappee, Hey, et al. (2023), submitted to PASP (arXiv:2304.03791).
74. *COol Companions ON Ultrawide orbiTS (COCONUTS). III. A Very Red L6 Benchmark Brown Dwarf around a Young M5 Dwarf*. Zhang, Liu, Morley, et al. (2022), 2022ApJ...935...15Z.

75. *Investigating the Nature of the Luminous Ambiguous Nuclear Transient ASASSN-17jz*. Holoien, Neustadt, Vallely, et al. (2022), 2022ApJ...933..196H.
76. *The Curious Case of ASASSN-20hx: A Slowly-Evolving, UV and X-ray Luminous, Ambiguous Nuclear Transient*. Hinkle, Holoien, Shappee, et al. (2022), 2022ApJ...930...12H.
77. *The Rapid X-ray and UV Evolution of ASASSN-14ko*. Payne, Shappee, Hinkle, et al. (2022), 2022ApJ...926..142P.
78. *Measuring an off-Center Detonation through Infrared Line Profiles: The peculiar Type Ia Supernova SN 2020qxp/ASASSN-20jq*. Hoeflich, Ashall, Bose, et al. (2021), 2021ApJ...922..186H.
79. *Simultaneous Multiwavelength Flare Observations of EV Lacertae*. Paudel, Barclay, Schlieder, et al. (2021), 2021ApJ...922...31P.
80. *The Changing-look Blazar B2 1420+32*. Mishra, Dai, Chen, et al. (2021), 2021ApJ...913..146M.
81. *ASASSN-14ko is a Periodic Nuclear Transient in ESO 253-G003*. Payne, Shappee, Hinkle, et al. (2021), 2021ApJ...910..125P.
82. *Early-time Light Curves of Type Ia Supernovae Observed with TESS*. Fausnaugh, Vallely, Kochanek, et al. (2021), 2021ApJ...908...51F.
83. *Discovery and follow-up of ASASSN-19dj: an X-ray and UV luminous TDE in an extreme post-starburst galaxy*. Hinkle, Holoien, Auchettl, et al. (2021), 2021MNRAS.500.1673H.
84. *SN 2021csp – the explosion of a stripped envelope star within a H and He-poor circumstellar medium*. Fraser, Stritzinger, Brennan, et al. (2021), submitted to Nature Astronomy (arXiv:2108.07278).
85. *To TDE or not to TDE: the luminous transient ASASSN-18jd with TDE-like and AGN-like qualities*. Neustadt, Holoien, Kochanek, et al. (2020), 2020MNRAS.494.2538N.
86. *COol Companions ON Ultrawide orbiTS (COCONUTS). I. A High-gravity T4 Benchmark around an Old White Dwarf and a Re-examination of the Surface-gravity Dependence of the L/T Transition*. Zhang, Liu, Hermes, et al. (2020), 2020ApJ...891..171Z.
87. *WISE J072003.20-084651.2B is a Massive T Dwarf*. Dubuy, Liu, Best, et al. (2019), 2019AJ....158..174D.
88. *ASASSN-18tb: a most unusual Type Ia supernova observed by TESS and SALT*. Vallely, Fausnaugh, Jha, et al. (2019), 2019MNRAS.487.2372V.
89. *PS18kh: A New Tidal Disruption Event with a Non-axisymmetric Accretion Disk*. Holoien, Huber, Shappee, et al. (2019), 2019ApJ...880..120H.
90. *Discovery and progenitor constraints on the Type Ia supernova 2013gy*. Holmbo, Stritzinger, Shappee, et al. (2019), 2019A&A...627A.174H.
91. *Red versus Blue: Early Observations of Thermonuclear Supernovae Reveal Two Distinct Populations?*. Stritzinger, Shappee, Piro, et al. (2018), 2018ApJ...864L..35S.

92. *gPhoton: The GALEX Photon Data Archive*. Million, Fleming, Shaio, et al. (2016), 2016ApJ...833..292M.

Non-Refereed Articles

Conference proceeding, abstracts, white papers, and AAS Research Notes.
